

CHIRANJEEV TRIPATHI

Computer Science Undergraduate | Data Analytics & Machine Learning Enthusiast

Bhopal, India | +91-9406775006 | chiranjeevtripathi2204@gmail.com | linkedin.com/in/chiranjeev-tripathi | github.com/chiranjeev

Core Skills

Programming: Java, Python, SQL

Data Analytics: SQL, Microsoft Excel, Power BI, Data Cleaning, Data Transformation, Exploratory Data Analysis (EDA), Data Visualization, Dashboard Development, KPI Development, Data Modeling, ETL, Statistical Analysis, **Predictive Analytics**, DAX, Power Query, Window Functions, CTEs

Machine Learning, Cloud & Tools: Predictive Analytics, Scikit-learn, Classification, Regression, Model Evaluation, AWS (S3, EC2, RDS, Glue, Athena, QuickSight), MySQL, SQL Server, Git, GitHub

Projects

Vendor Performance Analytics Dashboard | Python, SQL Server, Power BI, Excel, DAX

- **Problem Solved:** Vendor and inventory data were scattered across 6 disconnected sources, making it **difficult to identify underperforming vendors, slow-moving stock, and margin leakage** in a timely manner.
- Integrated and cleaned 6 datasets (Sales, Purchases, Purchase Prices, Vendor Invoice, Beginning Inventory, and Ending Inventory) using **Python** and **Excel** for data preprocessing and validation.
- Built **SQL** data models using Joins and Views, and developed interactive Sales Analysis and Inventory Analysis dashboards in **Power BI** using **DAX**.
- Delivered insights into vendor performance, sales trends, inventory optimization, and profitability, **enabling faster, data-driven vendor and stock decisions**.

Customer Churn Analysis & Prediction | Python, SQL Server, Power BI, Excel, Random Forest

- **Problem Solved:** The business **lacked early visibility into which customers were likely to churn**, resulting in reactive rather than proactive retention efforts.
- Cleaned and transformed customer data using **Excel**, leveraged **SQL** (Joins & Views) for data modelling, and developed Customer Churn Analysis and Churn Prediction dashboards in **Power BI**.
- Built a **Random Forest** machine learning model in **Python** to predict customer churn and **flag high-risk customers** for proactive retention strategies.
- Analysed customer behaviour, churn trends, demographics, and service usage to **support customer retention and reduce churn**.

Banking Dataset Analysis | SQL Server, Power BI, Excel, DAX, Generative AI

- **Problem Solved:** Raw, unstructured banking records across customers, accounts, loans, and transactions **prevented a unified, real-time view of deposits, loans, and branch performance** for informed decision-making.
- Integrated, cleaned, and transformed banking datasets containing customer, account, loan, and transaction records using **Excel**, **SQL Server**, and Power Query to create analysis-ready data.
- Designed relational **SQL** data models using Joins, Views, Common Table Expressions (CTEs), and **Window Functions** for efficient reporting and business analytics.
- Developed interactive **Power BI** dashboards with **DAX** measures to monitor deposits, loans, customer demographics, branch performance, account activity, and key financial KPIs.
- Leveraged **ChatGPT**, **Claude**, and **Perplexity AI** for prompt engineering, synthetic dataset creation, SQL query generation, DAX optimization, dashboard design, and documentation while independently validating and refining all analytical outputs.
- Generated actionable insights through customer segmentation, branch-wise performance analysis, and financial trend visualization to **support data-driven decision making**.

Certifications

- **Data Analyst Complete Beginner to Advanced Bootcamp** – Udeemy
- **Generative AI for Data Analytics** – Simplilearn
- **Introduction to Machine Learning** – NPTEL
- **AWS for Data Analytics** – In Progress

Education

Bachelor of Technology (B.Tech), Computer Science and Engineering VIT Bhopal University	2023 – Present (Expected 2027) CGPA: 8.8 / 10
Class XII (CBSE) DAV Public School, Burhar, Madhya Pradesh	2022
